Thoothukudi, Tamil Nadu

Summary

Computer Science Engineering student specializing in Cybersecurity with experience in security operations dashboards, vulnerability assessment, web application security, and cybersecurity-focused software development. Interested in mobile security, threat monitoring, and security research. Currently developing knowlege towards Cloud Security and Network Security skills

Education

- **Erode Sengunthar Engineering College** 2022 - 2027
  M.Tech - Computer Science And Engineering (Integrated) - CGPA: 8.18 (6th Semester)
- **Daniel Thomas Matric Higher Secondary School** 2019 - 2022
  HSC: 76.1% SSLC: 63.6%

Technical Skills

- **Cybersecurity:** Vulnerability Assessment, OWASP Top 10, Web Application Security
- **Security Tools:** Nmap, Burp Suite, Wireshark, Metasploit
- **Networking:** TCP/IP, Routing, DNS, HTTP, HTTPS
- **Programming:** Python
- **Operating Systems:** Linux, Windows
- **Version Control:** Git, GitHub

Soft Skills

- Communication
- Adapdability
- Collaboration

Projects

- **SOC -X** • Github July 2025 - Aug 2025

SOC-X is a security operations web dashboard that ingests events from a Flask API and displays them as alerts and incidents. It analyzes these events to determine the system's threat level and allows SOAR-style response actions such as playbook execution, brute-force blocking, vulnerability scanning, and malware quarantine in real time.

- **PUP - Pentest Unified Platform** • Github Oct 2025 - Dec 2025

A simulation-based SOC and penetration testing dashboard built to demonstrate security analysis workflows. The platform visualizes simulated packet traffic, vulnerability insights, and attack surface mapping to help users understand common security threats and defensive monitoring techniques.

- **F.A.S.A - File Automation and Security Assistance** • Github Feb 2026 - Apr 2026

Developed a secure file analysis and automation platform to monitor and organize system files. Implemented automated file scanning and structured categorization to improve file management and visibility. Designed an interactive web interface for analyzing file metadata and system storage patterns. Built using a modular and scalable architecture to demonstrate security-focused system design principles.

- **S.H.I.E.L.D. – Secure Handover Integrity, Evidence, Logging and Delegation** June 2026

Developing a privacy-preserving Android cybersecurity framework that addresses the Trusted Handover Problem through delegated access control, OTP-based authorization, device monitoring, risk assessment, and tamper-evident audit logging for smartphone repair and service scenarios.

Achievements

- **Best Innovative Idea Award -** HACKZILLA 2k25 Hackathon (KPRIET) - **Modus Mapping**

Co-curricular Activities

- **2nd Prize -** VYASA 2K26 Event (Inter College), ESEC.
- **Finalist -** BitNBuild'25 Hackathon (State Rounds), GDSC CRCE - **Modus Mapping**

Certifications

- **Cybersecurity -** Infosys Springboard
- **Introduction to Python -** Infosys Springboard
- **Cybersecurity Professional Certification -** Google, Coursera(Ongoing)
